SUMMARY

Full Stack Engineer with 1 year and 8 months of professional experience building production web and mobile applications with React/Next.js and .NET (C#). Independently designed, built, and deployed Kasa POS, an offline-first point-of-sale system, from concept to live production in under 2 months for a paying client. Comfortable owning features end-to-end, from architecture and data modeling through deployment and post-launch support.

FEATURED PROJECT — KASA POS

Offline-first Point of Sale system · Personal project, independently built and deployed to a live paying client

- Independently designed, built, and deployed a full-stack POS system in under 7 weeks (May–June 2026): Next.js PWA frontend and a .NET backend using Clean Architecture, CQRS, MediatR, and EF Core.
- Implemented offline-first sync so cashiers can process transactions without internet, with automatic reconciliation once connectivity returns.
- Built mobile cashiering with Bluetooth receipt printing and barcode scanning for in-store hardware.
- Designed PIN-based cashier authentication, shift management with cash reconciliation (over/short tracking), and role-based access with multi-tenant-ready architecture for future SaaS expansion.
- Traced and resolved financial reporting inconsistencies across dashboard, sales reports, shift close, and P&L back to their root cause: missing cost snapshots and rounding drift introduced by a pricing model migration.
- Built inventory tracking with low-stock alerts, expiry monitoring, and automatic stock-loss valuation.
- Deployed as a self-contained .NET service with SQLite and a Next.js PWA to a client's Windows 10 machine, running in production with a batch-script update process.

PROFESSIONAL EXPERIENCE

Full Stack Developer — Repoint Solutions

2025 – Present

- Ship features across four production applications spanning web and mobile: Helps Innovation (React/C#), Careerpoint (Next.js/C#), Neuropoint (React/C#), and Helps Emergency (React Native, published on Google Play).
- Build frontend features in React and Next.js and backend logic in C# (.NET) following Clean Architecture and CQRS patterns.
- Design and maintain MySQL database schemas and queries supporting core application workflows.
- Traced and resolved cross-team production issues, including an Axios interceptor error-propagation bug that was masking failed API calls, and a React Query cache-invalidation issue causing stale data across components.

Full Stack Developer — Pre-Employment Training & Internship

6 months, 2025

- Completed an intensive pre-employment training program simulating agile production workflows, building pixel-perfect UIs from Figma mockups.
- Built and maintained modular UI components in React, React Native, Tailwind CSS, and Next.js during a 4-month frontend internship.
- Implemented async state management with TanStack Query and type-safe form validation with Zod.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, React Native, Tailwind CSS, TanStack Query, Zod

Backend: C# / .NET (Clean Architecture, CQRS, MediatR, EF Core), REST API design, PHP (Laravel), Node.js

Database: MySQL, SQLite, PostgreSQL (basic)

Tools & Practice: Git, Figma (UI implementation), CI/CD (GitHub Actions), Agile/Scrum, Postman, unit testing

EDUCATION

BS in Information Technology — Tagoloan Community College 2020 – 2025

Senior High School — Southern Philippines College, Cagayan de Oro City 2018 – 2020
